Saquito hexagonal: Como modificar el talle

This post is for all those readers of the blog who consulted me about how to modify the size of the hexagon jacket. We know that if we add more rounds, we can increase the size of the hexagons, but there comes a point where we achieve the desired body size, but the sleeves are too wide , or vice versa, we have the desired width of the sleeves but the jacket is too narrow.

I will show you how, by changing 1 or 3 sides of the hexagon, we can change the shape of the jacket.

Here is the original jacket, without any modification:

Original hexagon jacket

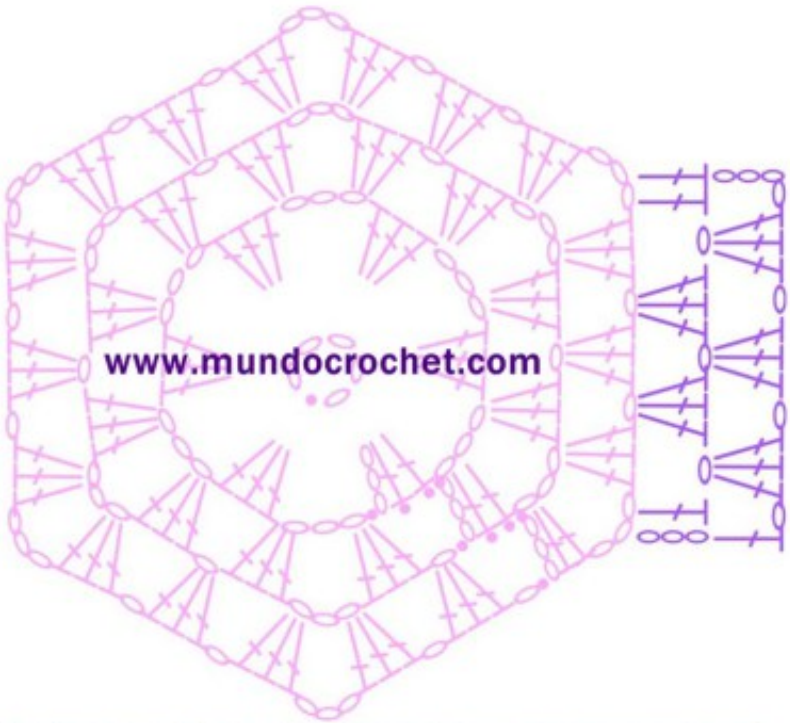

www.mundocrochet.com

Suppose that we want to modify the length of the jacket, the length of the sleeves, the width of the back or front leaving the rest unchanged. To do this you just have to modify one side of the jacket.

Graphically you will find it more clear:

Hexagon jacket: increasing 1 side

www.mundocrochet.com

Here you can see the different options. Depending on how you fold the hexagon will be the part of the jacket that you modify:

Increases in the back

www.mundocrochet.com

Increases in the front

www.mundocrochet.com

Increases in the length

www.mundocrochet.com

Increases in the sleeves

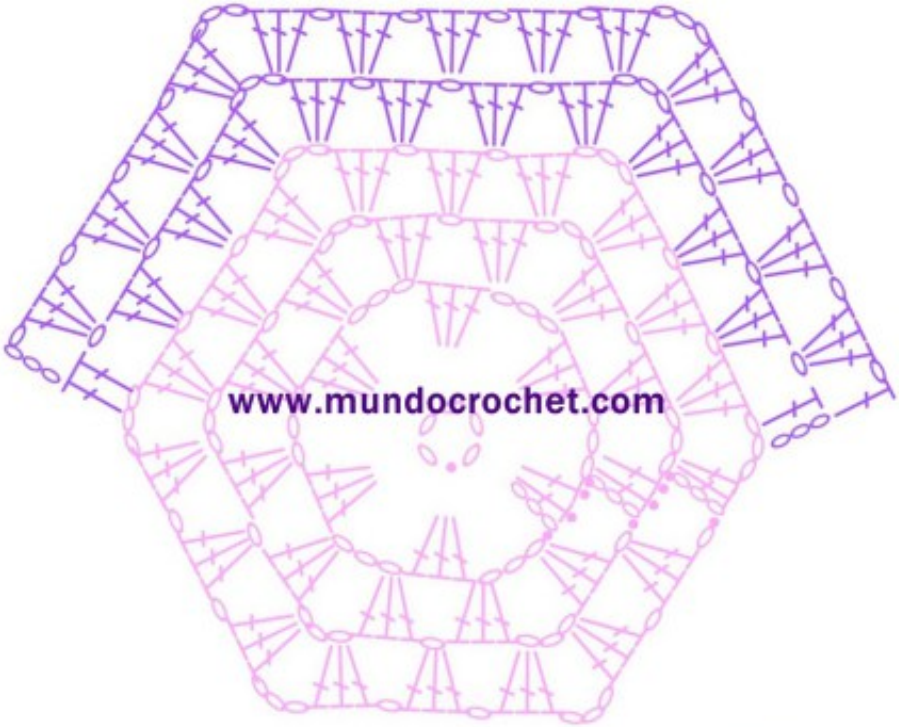

www.mundocrochet.com

In the case that want to modify several sides at once, you just have to continue crocheting in 3 of the 6 sides of the hexagon.

This way you can modify the front, back and length at the same time, or the shoulders and sleeves. It depends on how you fold the hexagon to form the jacket.

Graphically:

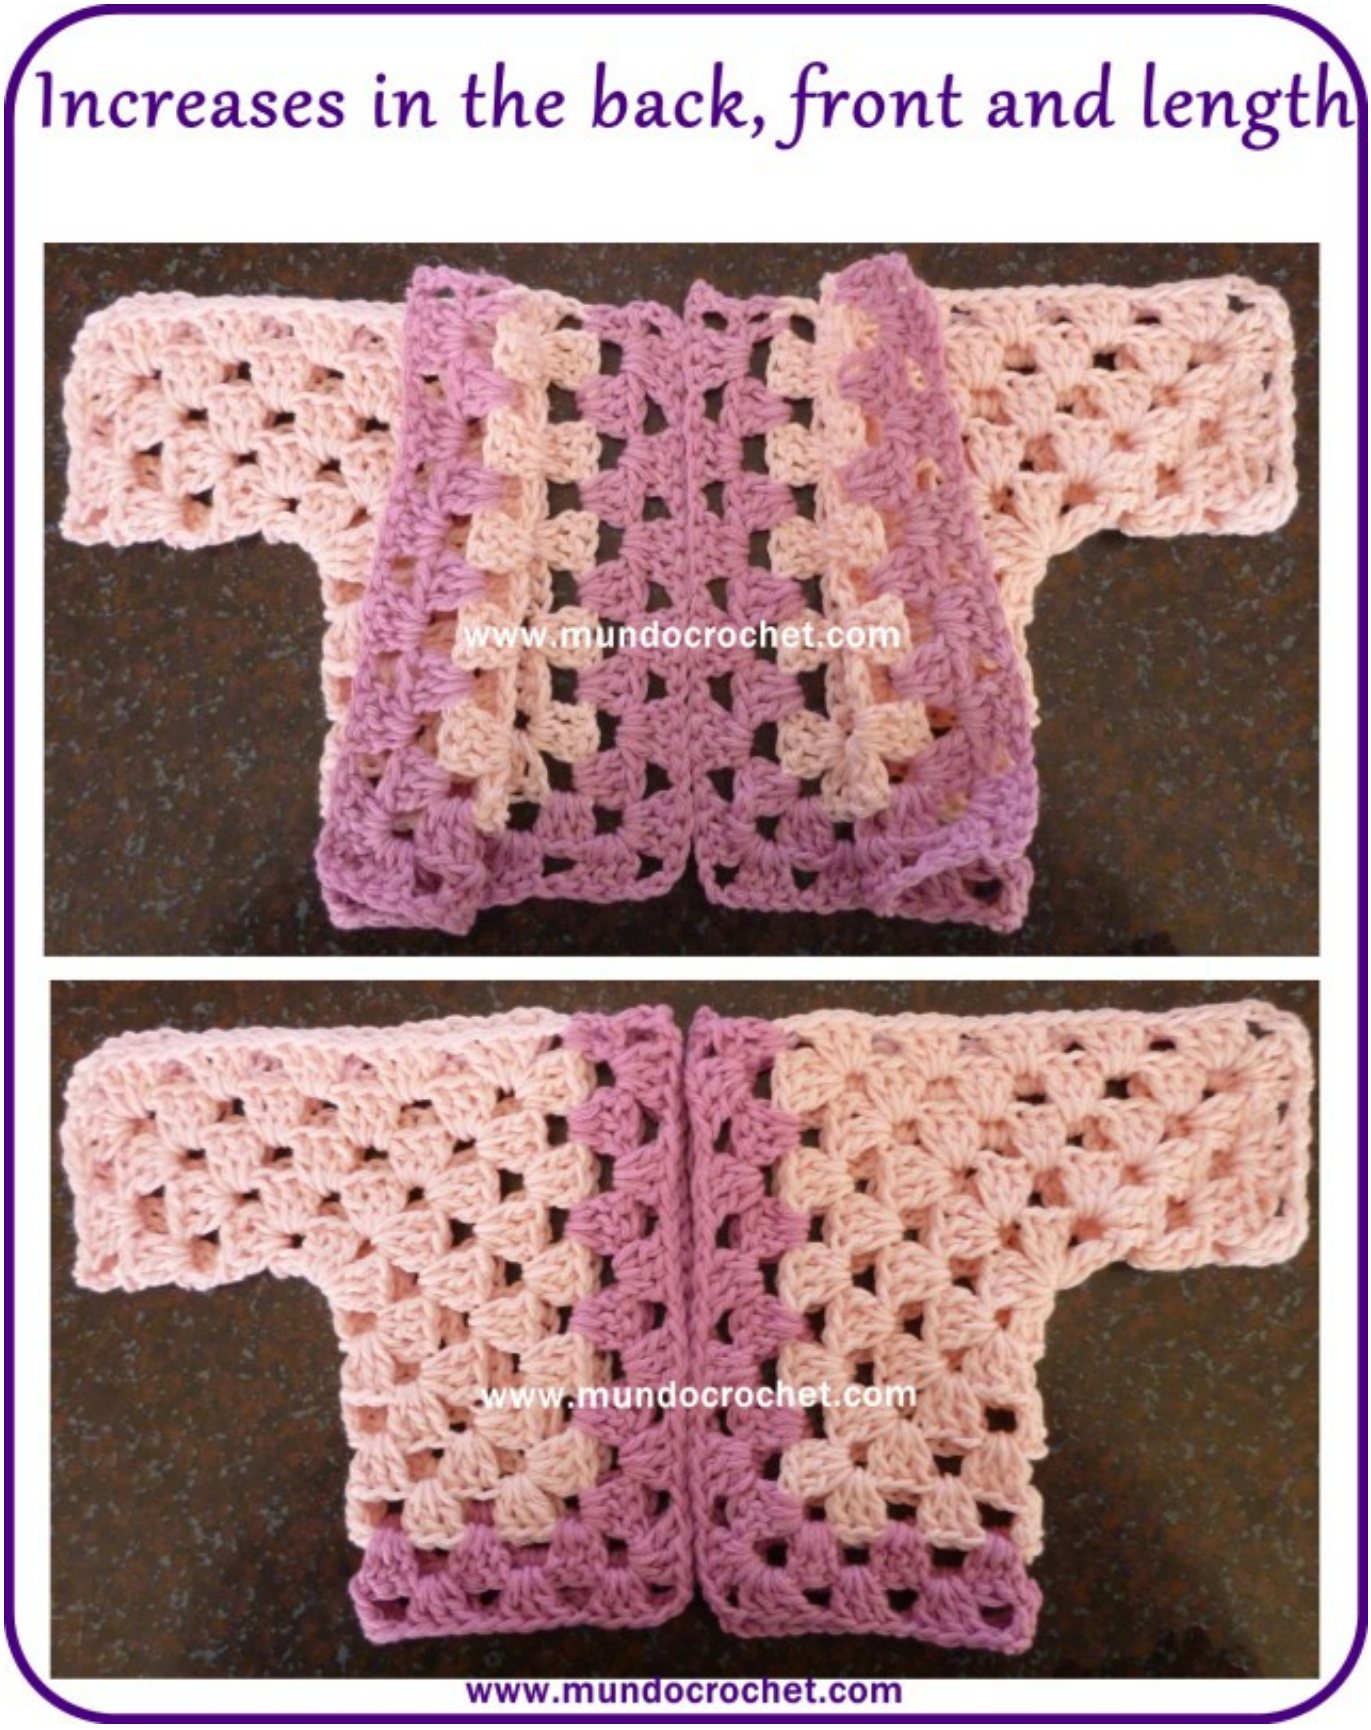

Hexagon jacket: increases in 3 sides

www.mundocrochet.com

Here you can see the pictures of the 2 options:

Increases in the back, front and length

I hope you find this post clear and useful to crochet the jacket in all the sizes that you want.

Here **is the Spanish version of this post.**
